

option A

Multi-City Weather Report

- Sunnyvale, CA - 86 H, 53 L
- Atherton, CA - 86 H, 53 L
- Mountain View, CA - 86 H, 53 L
- San Francisco, CA - 74 H, 40 L

[Add Cities](#) [Change to 5-Day Forecast](#)

option B

5-Day Weather Forecast for . . .

Sunnyvale, CA - 86 H, 53 L

- Monday - 89 H, 58 L
- Tuesday - 81 H, 55 L
- Wednesday - 87 H, 54 L
- Thursday - 88 H, 53 L
- Friday - 87 H, 54 L

[Change to Multi-City Report](#)

[Extended Forecast from Weather.com](#)

For this DHTML delayed pop-up, the user has the option of choosing a 5-day forecast view or Multi-city view. If user currently has multi-city in their My Yahoo! weather their default will be Multi-City view. Otherwise, their default will be 5-day forecast. Changing/Adding cities will be done through current My Y! weather module edit page.

Today's Headline is the Top Story Shown Here

Featuring today's top story is an important aspect of making this site "sticky" as users will most likely want to know what's going on. If there is a way to more dynamically serve up content without requiring more real estate or user interaction, it would definitely give us an advantage with regards to content delivery as well as meeting user needs to consume information.

*** Today's Headline is the Top Story Shown Here because it deserve to be presented.

- Yet another story that can justifiably occupy the space up on top.
- This story deserves as much attention as the other three occupying this module.
- There are often more than one headlines to be presented, so why give them only one.
